# General Characteristics

## GENERAL

### CONTENT

This report constitutes a chapter of Volume I of the Housing reports. Volume I presents basic statistics relating to practically all subjects for which information was collected in the Census of Housing, taken as of April 1, 1950. The dwelling unit is the reporting unit in this volume.

Statistics are presented for the Territory by residence (urban and rural) and for the following types of areas within the Territory: Honolulu Standard Metropolitan Area, counties, islands, urban places, and places of 1,000 to 2,500 inhabitants.

Characteristics are not shown if the base contains fewer than three dwelling units in order to avoid disclosure of information for individual units.

### COMPARABILITY WITH 1940 CENSUS OF HOUSING

In general, the scope of the subject matter covered in the 1950 Census of Housing is the same as in the 1940 Census. Some items, however, were not enumerated in both 1940 and 1950. Information on year built and land ownership of owner-occupied units was collected in 1950 but not in 1940. On the other hand, information was collected on radios in 1940 but was not collected in 1950. Besides these modifications in scope, there have been several changes in concepts and definitions from the 1940 Census. Departures from the 1940 procedures were adopted after consultation with users of housing census data in order to increase the usefulness of the statistics, even though it was recognized that comparability might be adversely affected in some cases. Changes in definitions and procedures are described in the section on "Definitions and explanations."

For most of the subjects, the 1940 and the 1950 data are comparable. In some cases only rough comparisons are possible and these should be made with caution.

### HOUSING REPORTS

Five volumes contain the principal findings of the 1950 Census of Housing. Volume I, *General Characteristics*, is the basic pub-

lication. This volume contains data on practically all housing items enumerated in the census, presented as a separate chapter for the United States, each State, the District of Columbia, Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States. Each of the chapters is available as a separate bulletin (Series H-A). Volumes II through V are limited to continental United States.

Detailed housing data, as well as population data, for each of the census tracts in Hawaii appear in Volume III of the Population reports, comprising the Census Tract bulletins (Series P-D). The housing subjects presented include: occupancy, tenure, number of dwelling units in structure, condition and plumbing facilities, year built, persons per room, refrigeration equipment, contract monthly rent, and value of 1-dwelling-unit structures.

### POPULATION REPORTS

The major portion of the information compiled from the 1950 Census of Population appears in Volume II, *Characteristics of the Population*. This volume is available also in three series of bulletins: Series P-A, "Number of Inhabitants"; Series P-B, "General Characteristics"; and Series P-C, "Detailed Characteristics."

### AVAILABILITY OF UNPUBLISHED DATA

Practically all of the housing data that were tabulated are published in this report. Unpublished statistics can be made available, however, for the cost of tabulation and transcription. An estimate of the cost of providing unpublished data will be made upon request to the Director, Bureau of the Census, Washington 25, D. C.

### MAP

A map of the Territory showing the outlines of counties and islands, and the location of cities, towns, and villages is included in this report.

## DEFINITIONS AND EXPLANATIONS

### URBAN AND RURAL RESIDENCE

In the 1950 Census of Hawaii, data have been classified by urban and rural residence for the first time. Urban housing comprises all dwelling units in places of 2,500 inhabitants or more. The remaining dwelling units are classified as rural. The rural classification comprises a variety of residences, which range from isolated homes in the open country to dwelling units in places having nearly 2,500 inhabitants.

Although housing data were not shown by urban and rural residence in 1940, separate statistics were presented for Honolulu, Hilo, and Wailuku cities.

### PLACE

The term "place" refers to a concentration of population regardless of legally prescribed limits, powers, or functions.

Because all places in Hawaii are unincorporated and have no local governmental functions, the Bureau of the Census has acknowledged locally delineated boundaries.

### STANDARD METROPOLITAN AREA

It has long been recognized that, for many types of social and economic analysis, it is necessary to consider the city and its surrounding area in which the activities form an integrated social and economic system. Prior to the 1950 Census, areas of this type had been defined in somewhat different ways by various agencies. The usefulness of data published for any of these areas was limited by this lack of comparability.

Accordingly, the Bureau of the Census in cooperation with a number of other Federal agencies, under the leadership of the Bureau of the Budget, established the "standard metropolitan

area" so that a wide variety of statistical data might be presented on a uniform basis. Since counties instead of minor civil divisions are generally used as the basic component of standard metropolitan areas, it was felt that many kinds of statistics could be compiled for them.

**Definition.**—Generally a standard metropolitan area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more. Counties contiguous to the one containing such a city are included in a standard metropolitan area if according to certain criteria they are essentially metropolitan in character and socially and economically integrated with the central city. Since Honolulu County is an island, the criteria relative to contiguous counties were not applied.

#### DWELLING UNIT

In general, a dwelling unit is a group of rooms or a single room occupied, or intended for occupancy, as separate living quarters by a family or other group of persons living together or by a person living alone.

Ordinarily, a dwelling unit is a house, an apartment, or a flat. A dwelling unit may be located in a structure devoted to business or other nonresidential use, such as quarters in a warehouse where the watchman lives or a merchant's quarters in back of his shop. Trailers, boats, tents, and railroad cars, when occupied as living quarters, are included in the dwelling unit inventory.

A group of rooms, occupied or intended for occupancy as separate living quarters, is a dwelling unit if it has separate cooking equipment or a separate entrance. A single room, occupied or intended for occupancy as separate living quarters, is a dwelling unit if it has separate cooking equipment or if it constitutes the only living quarters in the structure. Each apartment in a regular apartment house is a dwelling unit even though it may not have separate cooking equipment. Apartments in residential hotels are dwelling units if they have separate cooking equipment or consist of two rooms or more.

Living quarters of the following types are not included in the dwelling unit inventory: rooming houses with five lodgers or more, transient accommodations (tourist courts, hotels, etc., predominantly for transients), and barracks for workers (railroad, construction, etc.). Living quarters in institutions (for delinquent or dependent children, for handicapped persons, for the aged, for prisoners, etc.), general hospitals, and military installations are likewise excluded from the dwelling unit inventory except for dwelling units in buildings containing only family quarters for staff members.

The count of dwelling units in the 1950 Census may be considered comparable with the count in the 1940 Census. Even though some living quarters were classified as separate dwelling units by one definition and not by the other, the over-all effect of these differences is believed to be small. In the 1940 Census, a dwelling unit was defined as the living quarters occupied, or intended for occupancy, by one household. A household consisted of a family or other group of persons living together with common housekeeping arrangements, or a person living entirely alone. The enumerator was not explicitly instructed to define living quarters as dwelling units on the basis of cooking equipment or separate entrance. Further, in 1940, living quarters with five lodgers or more were tabulated as dwelling units, whereas in 1950 such living quarters were not included in the dwelling unit count.

#### OCCUPANCY CHARACTERISTICS

**Occupied dwelling units.**—A dwelling unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, as for example, on vacation. However, a dwelling unit occupied at the time of enumeration by nonresidents is not classified as occupied but as a "nonresident" dwelling unit.

**Occupied dwelling units and households.**—A household consists of those persons who live in a dwelling unit; by definition, therefore, the count of occupied dwelling units is the same as the count of households. However, there may be small differences between these counts in the Housing and the Population reports because the data were processed independently.

**Population in dwelling units.**—The count of the population in dwelling units represents the population in living quarters which were classified as dwelling units and therefore excludes the population in institutions and other quasi households. This count was used in computing the 1950 "population per occupied dwelling unit."

**Tenure.**—A dwelling unit is "owner-occupied" if the owner was one of the persons living in the unit even if the dwelling unit was not fully paid for or had a mortgage on it. When the owner of the unit was a member of the household, but was temporarily away from home, as in the case of military service or temporary employment away from home, the unit was still classified as "owner-occupied."

Owner-occupied dwelling units are further subdivided into two categories: those cases in which both the structure and the land on which it is built are owned by the occupant; and those cases in which the structure is owned by the occupant, but the land is rented or rent free.

All occupied dwelling units that are not "owner-occupied" were classified as "renter-occupied" whether or not any money rent was paid for the living quarters. Rent-free units and units received in payment for services performed are thus included with the renter-occupied units.

**Race of household head.**—The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public and most categories obviously refer to nationalities. Persons who are a mixture of Caucasian and any other race are classified according to the race of the nonwhite parent. Mixtures of nonwhite races, other than Hawaiian, are classified according to the race of the father. Separate statistics are given in this report for households where the head of the household is Hawaiian (including part Hawaiian), Caucasian, Chinese, Filipino, or Japanese.

**Number of persons.**—All persons enumerated in the Population Census as members of the household were counted in determining the number of persons who live in the dwelling unit. Lodgers, foster children, wards, and resident employees who share the living quarters of the household head are included in the household in addition to family members.

**Median number of persons.**—The median number of persons per occupied dwelling unit is the theoretical value which divides the dwelling units equally, one-half having more persons and one-half having fewer persons than the median. In the computation of the median, a continuous distribution was assumed. For example, when the median is in the 3-person group, the lower and upper limits of the group were assumed to be 2.5 and 3.5, respectively.

**Persons per room.**—The number of persons per room was computed by dividing the number of persons by the number of rooms in the dwelling unit. The ratio was computed separately for each occupied dwelling unit.

**Nonresident dwelling units.**—A nonresident dwelling unit is a unit which is occupied temporarily by persons who usually live elsewhere. Nonresident units are not included with occupied dwelling units. They are presented as a separate group in tables 1 and 13, and included in the "all other" category or with vacant units in the remaining tables.

**Vacant dwelling units.**—A dwelling unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant dwelling units were included if they were intended for occupancy as living quarters. New units not yet occupied were enumerated as vacant dwelling units if construction had proceeded to the extent that all the exterior windows and doors were installed and final usable floors were in place. Otherwise, potential units under construction were not enumerated.

The enumeration of vacant units in the 1950 Census of Housing is not entirely comparable with the procedure used in the 1940 Census. Counts of total vacant units in 1950 are considered more inclusive than in 1940. In 1940, vacant units were enumerated only if they were habitable; vacant units which were uninhabitable and beyond repair were omitted. In 1950, all

vacant units, whether or not dilapidated, were included if they were intended for occupancy as living quarters.

The 1950 category "For rent" consists of vacant units offered for rent as well as those being offered for rent and for sale. The "for sale only" group is limited to those for sale only. "Not for rent or sale" includes units already rented or sold but not yet occupied, and units being held off the market for other reasons.

*Not dilapidated vacant units for rent or sale (available vacant units).*—This category provides a measure of dwelling units on the housing market in April 1950. It does not include any dilapidated vacant units or vacant units being held off the market for a variety of reasons. No comparable classification was established in 1940.

### STRUCTURAL CHARACTERISTICS

**Number of dwelling units in structure.**—A structure either stands by itself with open space on all sides or has vertical walls dividing it from all other structures. The statistics are based on the number of units classified by the number of dwelling units in the structure rather than on the number of residential structures.

There are some differences between the 1950 and 1940 classifications. In the 1950 tabulations, structures with business were not distinguished from structures without business. In 1940, such distinction was made for units in structures with one to four dwelling units. The number of structures with business is generally small, so that for most practical purposes this difference does not affect the comparability of the data. The term "family" in the 1940 type of structure categories is equivalent to "dwelling unit" in the 1950 categories. Further, two single-family attached dwellings were considered as one structure with two dwelling units in 1940, but as two structures with one dwelling unit each in 1950.

**Number of rooms.**—All rooms which are used, or are suitable for use, as living quarters are counted in determining the number of rooms in the dwelling unit. Included are kitchens, bedrooms, dining rooms, living rooms, and permanently enclosed sunporches of substantial size; finished basement or attic rooms, recreation rooms, or other rooms used or suitable for use as living quarters; and rooms used for office purposes by a person living in the dwelling unit. A kitchenette or "half-room" which is partitioned off from floor to ceiling is counted as a separate room, but a combined kitchenette and dinette separated only by shelves or cabinets is counted as only one room. Not counted as rooms are bathrooms, strip or pullman kitchens, halls or foyers, alcoves, pantries, laundries, closets or storage space, unused basement or attic rooms not suitable for living quarters, and rooms subleased for office or business purposes by a person or persons not living in the dwelling unit.

**Year built.**—The year the structure was built refers to the year in which the original construction was completed, not to the year in which any later remodeling, addition, reconstruction, or conversion may have taken place. "Year built" statistics are based on dwelling units classified by the date of the original construction of the structure in which they are located. The figures do not represent the number of dwelling units added to the inventory during a given period. They represent the number of units constructed during a given period plus the number created by conversions in structures originally built during the same period, minus the number destroyed in structures built during the period. Losses occur through demolition, fire, flood, disaster, and conversion to nonresidential use or to fewer dwelling units.

**Exterior material.**—The principal material used for the exterior walls of a structure is classified as "Wood," "Masonry," and "Other." The material used for the roof is disregarded. Combination finishes, such as brick and wood, are classified according to the material which covers the major part of the outside walls. "Wood" includes wood shingles as well as wood frame. "Masonry" includes stone and artificial stone, such as brick, brick

vener, concrete, cinder block, stucco, tile, etc. Canec, a composition wallboard used in the Territory, is included in the "Other" category. In 1940, "Concrete" was published as a separate category and other masonry was classified as "Other." Statistics are based on the number of dwelling units classified by the type of material used for the structure in which they are located rather than on the number of residential structures.

### CONDITION AND PLUMBING FACILITIES

Both the condition of a dwelling unit and the type of plumbing facilities are considered measures of the quality of housing. These items have been combined into categories representing various levels of housing quality, ranging from the most desirable to the least desirable as measured by condition and plumbing facilities. Such comprehensive categories provide a more practical means of evaluating quality than is possible by the use of the individual items. The statistics on the combination of condition and plumbing facilities are limited to dwelling units for which reports were made on all items.

The category "With private toilet and bath" includes those dwelling units with both a flush toilet and a bathtub or shower inside the structure for the exclusive use of the occupants of the unit. "With running water, lacking private toilet or bath" includes those dwelling units having running water in the structure, but lacking a private flush toilet or lacking a private bathtub or shower. "No running water" includes units with only piped running water outside the structure or with only other sources of water supply, such as a hand pump.

In 1940, data for state of repair (condition) and plumbing facilities were not presented in combination.

**Condition.**—To measure condition, dwelling units were classified as "not dilapidated" or "dilapidated." A dwelling unit was reported as dilapidated when it had serious deficiencies, was run-down or neglected, or was of inadequate original construction, so that it did not provide adequate shelter or protection against the elements or endangered the safety of the occupants. A dwelling unit was reported as dilapidated if, because of either deterioration or inadequate original construction, it was below the generally accepted minimum standard for housing and should be torn down or extensively repaired or rebuilt.

The enumerator determined the condition of the dwelling unit on the basis of his own observation. He was instructed to appraise the condition of units uniformly, regardless of neighborhood or race of occupant. The enumerator was provided with detailed written instructions and with pictures illustrating the concepts "deterioration" and "inadequate original construction." In addition, a film strip accompanied by a recorded narrative was shown the enumerator. Photographs of houses and parts of houses depicted various levels of deterioration or inadequacy in housing, while the narrative informed the enumerator as to which were to be classified as "dilapidated" or "not dilapidated."

The types of deficiencies used in determining condition relate to weather tightness, extent of disrepair, hazards to safety, and inadequate or makeshift construction. Deficiencies which could be revealed only by an engineering survey, or such deficiencies as inadequate light or ventilation, or the presence of dampness or infestation, were not included among the criteria for determining condition of a dwelling unit.

Specifically, a dwelling unit was to be reported as dilapidated if—

1. It had one or more critical deficiencies, as for example:
  - a. Holes, open cracks, rotted, loose, or missing materials over a considerable area of the foundation, outside walls, roof, or inside walls, floors, or ceilings.
  - b. Substantial sagging of floors, walls, or roof.
  - c. Extensive damage by storm, flood, or fire.
2. It had a combination of minor deficiencies which were present in sufficient number and extent to give evidence that the

unit did not provide adequate shelter or protection against the elements or was physically unsafe. Examples of these deficiencies are—

- a. Holes, open cracks, rotted, loose, or missing materials over a small area.
- b. Shaky or unsafe porch, steps, or railings.
- c. Broken or missing window panes.
- d. Rotted or loose window frames which are no longer rainproof or windproof.
- e. Damaged, unsafe, or makeshift chimney.
- f. Broken, loose, or missing inside stair treads or risers, balusters, or railings.
- g. Deep wear on doorsills, doorframes, outside or inside steps, or floors.

3. It was of inadequate original construction. Examples of inadequate original construction are—

- a. Makeshift walls.
- b. Lack of foundation.
- c. Dirt floors.
- d. Inadequately converted cellars, garages, barns, and similar places.

Although the enumerator was provided with detailed oral and written instructions and with visual aids, it was not possible to eliminate completely the element of judgment in the enumeration of this item. There is evidence that some enumerators obtained too large or too small a count of dilapidated units. Consequently, data on condition for small areas, which depend on the work of one or two enumerators, are subject to a wider margin of error than is to be expected for larger areas, where the data represent the returns made by several enumerators.

In the 1940 Census, "dilapidation" was not enumerated; the concept "needing major repairs" was used to provide information about the condition of housing. A dwelling unit was classified as "needing major repairs" when parts of the structure such as floors, roof, plaster, walls, or foundation required major repairs or replacements. A repair was "major" when its continued neglect would have seriously impaired the soundness of the structure and created a safety hazard to the residents. The training program for this item in 1940 did not provide any visual aids or detailed oral and written instructions.

The 1940 Census concept of "major repairs" was replaced by the concept of "dilapidation" for the 1950 Census at the recommendation of a Federal interagency committee on housing adequacy. After a lengthy investigation including field tests of several concepts, the committee reported that "major repairs" was not always a reliable index of housing quality. There was evidence that the enumerator tended to use the cost of the repair in judging between major and minor repairs. Further, "major repairs" measures only the condition of the structure, not the structural level nor the ability of the house to provide adequate shelter. For example, a new house, constructed so that it does not provide adequate protection against the elements, might not technically be in need of "major repairs." Likewise, a unit might have a number of minor deficiencies, none of which technically constitute a "major repair," but which, when combined, indicate that the unit was inadequate. The committee concluded that the level of quality to be measured, fundamentally, was whether or not the dwelling unit was capable of providing adequate shelter or protection against the elements and sufficient safeguards for the safety of the occupants. The committee concurred that the term "dilapidated" most accurately described the concept it had recommended for measurement.

No reliable data have been obtained to compare the relationship between the "major repairs" category and the "dilapidated" category. However, it is the opinion of a number of qualified housing economists that the 1950 concept of "dilapidation" will generally provide a smaller count of poor housing than the 1940 concept of "major repairs." The two terms differ significantly, and the 1940 and 1950 results on condition are not comparable.

**Water supply.**—A dwelling unit has "piped running water" if water is piped to it from a pressure or gravity system. "No

piped running water" includes water from a hand pump or from a well or stream, where no piped running water is available.

A dwelling unit is counted as having hot piped running water whether it is available the year round or only part of the time.

A direct comparison cannot be made with the 1940 statistics on water supply. The principal difference in concept is in regard to the location of the piped running water. The 1950 data were collected in terms of location inside or outside the structure, whereas the 1940 data distinguished between location inside or outside the dwelling unit.

**Toilet facilities.**—A dwelling unit is reported as having a flush toilet if the toilet is inside the structure and is operated by means of water piped to it. A flush toilet for exclusive use is differentiated from one that is shared.

**Bathing facilities.**—A dwelling unit has a bathtub or shower if either type of equipment, supplied with piped running water (not necessarily hot water), is available inside the structure for the use of the occupants of the dwelling unit. An installed bathtub or shower located outside the structure was enumerated as "no bathtub or shower." Bathing facilities inside the structure for exclusive use are differentiated from facilities that are shared.

**Exclusive or shared use.**—Facilities are for exclusive use when the occupants of only one dwelling unit use them. If there are lodgers in the dwelling unit who also use the facilities, the facilities are still reported as for the exclusive use of occupants of the dwelling unit, provided that they are not used by occupants of another dwelling unit. Facilities are shared when occupants of two or more dwelling units use the same facilities. Also, facilities are shared if they would be used by the occupants of a unit now vacant, if that unit were occupied.

**Inside the structure.**—Facilities or equipment are considered "inside the structure" if they are located within the dwelling unit or elsewhere in the structure, such as in a common hallway, or in a room used by occupants of several dwelling units. Facilities or equipment on an open porch are considered to be outside the structure. Those located in an enclosed porch are considered to be inside the structure, even though it may be necessary to go outside the structure to reach them.

## EQUIPMENT

**Electric lighting.**—A dwelling unit is reported as "with electric lights" if it is wired for electric lights, even though service may have been temporarily suspended at the time of enumeration.

**Refrigeration equipment.**—The principal refrigeration equipment available to the dwelling unit was reported whether or not it was in use at the time of enumeration. "Mechanical" refrigeration includes any type of refrigeration operated by electricity, gas, kerosene, gasoline, or other source of power. "Ice" refrigeration includes a refrigerator, box, or chest cooled by ice supplied from an outside source. "Other" refrigeration includes other devices or methods used to refrigerate food, such as a spring house, cooler, well cooler, an ice house in which storage space is provided for perishable food, and any evaporative cooler which is operated by application of water. A window box, root cellar, open spring, or basement was classified as "none."

## FINANCIAL CHARACTERISTICS

**Contract monthly rent.**—Contract monthly rent is the rent at the time of enumeration contracted for by the renter, regardless of whether it includes furniture, electricity, cooking fuel, water, or other services sometimes supplied. Monthly rent for vacant dwelling units is the monthly rent asked at the time of enumeration. Data for vacant units are limited to not dilapidated units, for rent. Rental amounts were reported to the nearest dollar.

The contract monthly rent data for renter-occupied units are considered roughly comparable for the 1950 and the 1940 Censuses, except that in 1950 no dollar estimates were made for rent-free units, whereas in 1940 estimates made for rent-free units were

included in the distribution of renter units. The data for vacant units are not comparable, however, because in 1940 rental amounts for all vacant units were presented; whereas in 1950 rent data for vacant units are limited to not dilapidated vacant units, for rent. Furthermore, in 1940 estimates of monthly rent were obtained for owner-occupied units, whereas in 1950 such data were not collected.

The median contract monthly rent of the dwelling units is the rent which divides the series into two equal parts, one-half of the units with rents higher than the median and the other half with rents lower than the median. In the computation of the median, the limits of the class intervals were assumed to stand at the midpoint of the 1-dollar interval between the end of one of the rent groups and the beginning of the next. For example, the limits of the interval designated \$10 to \$14 were assumed to be \$9.50 and \$14.50. The medians for vacant dwelling units were computed on the basis of the tabulation groups in full detail as shown in the tables for renter-occupied units.

The average contract monthly rent instead of the median is presented in this report for places of 1,000 to 2,500 inhabitants. The average is the quotient of the sum of the rents divided by the number of dwelling units reporting rent.

**Value of one-dwelling-unit structures.**—Value represents the amount which the owner-occupant estimates that the property, including the structure and its land, would sell for under ordinary conditions and not at forced sale. For a vacant property, value is the sale price asked by the owner. For owner-occupied units, value data are limited to units in 1-dwelling-unit structures without business, on land owned by the occupant. For vacant units, data are limited to not dilapidated 1-dwelling-unit structures, for sale only.

In 1940, the value data were presented for owner-occupied units in both multi-dwelling-unit structures and 1-dwelling-unit structures. If the owner occupied one of the units in a structure

containing two or more dwelling units, or if a part of the structure was used for business purposes, the value reported in 1940 represented only that portion occupied by the owner and his household. No value data were presented for vacant units in 1940. Thus, the data on value are not strictly comparable for the two censuses because of differences in the types of units for which value was reported.

The median value of the dwelling units is the value which divides the series into two equal parts, one-half of the units with values higher than the median and the other half with values lower than the median. In computing the median, the limits of the class interval were assumed to stand at the beginning and end of the value group as shown in the tables.

The average value instead of the median is presented in this report for places of 1,000 to 2,500 inhabitants. The average is the quotient of the sum of the values divided by the number of dwelling units reporting value.

**Mortgage status.**—An owner-occupied dwelling unit was reported as mortgaged if the property on which it was located had an indebtedness in the form of a mortgage or deed of trust, or the occupants had a contract to purchase the property. Statistics on mortgage status are limited to owner-occupied dwelling units in structures without business having from one to four dwelling units in the structure.

#### DATA FOR SMALL AREAS

Users of data for the smaller areas should bear in mind that the data for such areas represent the work of a very small number of enumerators (often only one or two). The misinterpretation by an enumerator of the instructions for a particular item may, therefore, have an appreciable effect on the statistics for a very small community, even though it would have a negligible effect upon the figures for a large area.

Table 1.—OCCUPANCY, TENURE, RACE OF HOUSEHOLD HEAD, AND POPULATION PER OCCUPIED DWELLING UNIT, FOR THE TERRITORY, URBAN AND RURAL: 1950

Subject	The Territory	Urban	Rural	Percent distribution		
				The Territory	Urban	Rural
All dwelling units.....	120,606	82,561	38,045	100.0	100.0	100.0
